GIVE YOUR CREATIVITY A GLOW UP

The UCJV330-160 is Mimaki's latest UV-LED printer, equipped with a full range of unique features that enable superior image quality and high-speed printing. The machine also offers exceptional versatility, allowing users to print on a wide range of media, perform multi-layer printing with ease, add value with clear ink, and take advantage of print-and-cut functionality.

■ **Superior Quality – Even at High Speeds!**

With a practical speed of 28m²/h for a four-colour configuration or 18m²/h with white and/or clear inks, the UCJV330-160 delivers impressive turnaround times and finishes more jobs with increased efficiency. A new print head and new UV ink ejection technology ensure overwhelming high-quality printing even at high printing speeds.

■ **Boundless Possibilities with UV-LED Printing**

The UCJV330-160 provides a versatile platform for creating a diverse range of print applications. Equipped with standard basic colour inks plus white and clear inks, it offers the capability to print on a wide variety of substrates. The inclusion of clear ink opens up opportunities for value-added printing, allowing for everything from glossy and matte finishes to the creation of textured, 2.5D prints. Furthermore, its multi-layer printing function, which supports up to five layers, significantly expands the range of possible applications.

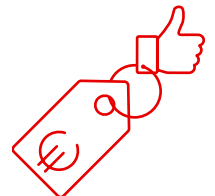

■ **Expanding Applications with Cutting**

The cutting function enables cutting after printing. Therefore, applications such as stickers and pop-ups can be created with this single unit. Furthermore, by utilising the ID cutting function, efficient printing and cutting without waste can be achieved.

■ **Eco-Friendly Technology**

Thanks to its low power consumption and the extended lifespan of its UV LED lamp, you can save more energy with the UCJV330-160. In fact, the UCJV330-160 consumes about half the power of a typical eco-solvent printer and about 1/3 the power of a typical latex/resin printer. Additionally, our UV inks are GREENGUARD GOLD-certified, which ensures low chemical emissions (VOCs).

■ **Effective Printer Management**

Printing with minimal ink use while maintaining high image quality is possible, thanks to the newly added Mimaki RasterLink7. Thus, running costs can be easily minimised. Mimaki's new cloud-based monitoring platform, PICT, is now available to support more efficient operations for all Mimaki customers, giving them the power to monitor the operational status and performance of their printers from a PC or mobile device.
